MNSTAR POWER DISTRIBUTION HARNESSSES: POWER PREP SERIES

Power Prep Harnesses provide Battery Hot, Ignition, Ground and in some configurations Timed fused outputs. These products feature battery direct power and grounds to provide main power distribution for aftermarket equipment installations. Power Prep Harnesses can be broken down into three basic groups:

- **Full Vehicle Power:** The output wires are either long enough to reach throughout the vehicle or are braided to pre-determined breakout locations throughout the vehicle
- **Power To the Center Console:** A main power feed and fuse panel at the battery with outputs circuits that reach to the center console
- **Power In the Center Console:** A main power feed from the battery to a console mounted fuse panel
