

XE vs XLE: WHAT'S THE DIFFERENCE?

The Mongoose® XE and XLE product lines have one major difference between each other:

SHOWN: MONGOOSE® XE 9"

XE stands for "eXtreme Edition". The pivot point is over center of the carriage. This version only allows the device to slide along the length of the arm.

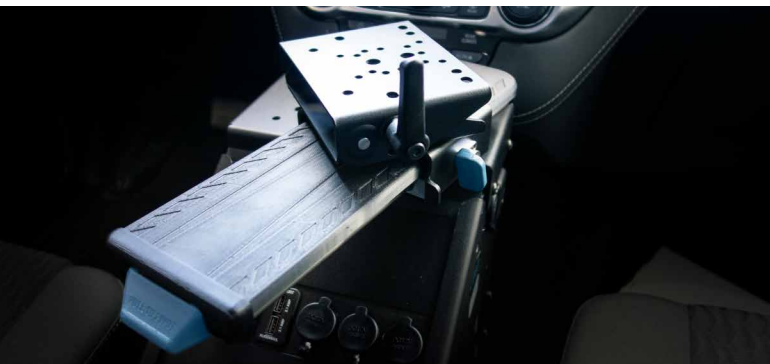

SHOWN: MONGOOSE® XLE 9"

XLE stands for "eXtended Length Edition". The pivot point is 4" off center of the carriage. This version allows the device to extend past the length of the arm while remaining offset from center of the pivot point at the back of the arm.

Both versions, XE and XLE, come in four sizes: 7", 9", 12", and 15"

The "-XX" part numbers go hand in hand with the sizes. For example, let's say a customer wants a XE Mongoose® that is 12", the recommended product is 7160-2001-12. This is the 12" XE Mongoose® swing arm.
