LIND POWER DISTRIBUTION UNIT

Lind's Power Distribution Unit (PDU) is designed to **streamline and safeguard power delivery** in demanding mobile and stationary environments. With 12 independently fused outputs divided into hot, ignition-controlled, and timed circuits, this unit **ensures that each connected device receives power exactly when needed**. Whether powering critical systems that must always remain on or peripherals that should only activate with the vehicle's ignition, this PDU **brings order and control to complex wiring systems**. Built for reliability in harsh conditions, this unit is ideal for fleets, emergency vehicles, utility trucks, and off-grid setups. Its compact, rugged housing and intuitive layout simplify installation and maintenance, while LED indicators provide real-time circuit status. **Designed to reduce parasitic drain and improve system efficiency**, it's a smart upgrade for any 12V DC-powered system requiring organized, dependable power distribution.

MEASUREMENTS

WEIGHT	HEIGHT	WIDTH	DEPTH
2.3 lbs / 1.04 kg	9.75 in / 24.8 cm	5.68 in / 14.4 cm	1.24 in / 3.1 cm

TECHNICAL SPECIFICATIONS

- Operating Voltage: 12 VDC
- Total Output Channels: 12 outputs (4 Battery Hot, 4 Ignition Hot, 4 Configurable Timed)
- Maximum Total Current: 125A
- Maximum Current Per Channel: 30A (fused)
- Fuse Type: Mini ATX Blade Fuse
- Operating Temperature: -20°C to +45°C
- Storage Temperature: -40°C to +85°C

PRODUCT SELECTION

ITEM NUMBER	DESCRIPTION
PDT12-5783-GJ	Power Distribution Unit – 12 Output (125A)

FEATURES & BENEFITS

- **12 Independent Fused Outputs:** 4 Battery Hot Outputs, 4 Ignition Hot Outputs, Configurable Timed Hot Outputs
- **Modular Design:** Scalable architecture to fit various vehicle types and configurations
- **Multi-Voltage Support:** Suitable for 12V systems
- **High Current Capability:** Total capacity up to 125A with individual circuits fused up to 30A
- **LED Status Indicators:** Real-time visual feedback for each channel
