HEADLINER CAMERA MOUNTS

Dash cameras have become synonymous with drivers today. OTR (Over-The-Road) truck drivers spend hours in their mobile office delivering goods statewide. Ensuring your fleet is safe and up-to-date with the latest technology is crucial for your on-time commitment to customers. Any failures can slow your business down, leaving customers unhappy.

Avoid failures and downtime when your drivers are on the road such as failed adhesives or recalibration from windshield replacements with the forward facing dash cameras.

Our mounts help keep your fleet moving and customers happy.

WHY GAMBER-JOHNSON HEADLINER CAMERA MOUNTS:

NO ADHESIVES

Stop your camera from falling off the windshield, costing precious time and money by not having a camera on and ready, no matter the location.

NO DRILLING

No holes or templates need to be drilled for installation.

OEM FITMENT

We custom fit our headliner and camera mounts to the most popular trucks and camera's in the market, making our solution easy to install.

NO RECALIBRATION

Since the cameras are not directly attached to the windshield, recalibrating cameras due to broken windshields is no issue, saving time and money by getting the vehicle back on the road and capturing video.
